Our New Segment

TECHBIZ

@ Malaysia IT Fair, Hall 3

Newest extension
is now on

Business Solutions!

With the increasing new technologies and acceleration of business pace and competitiveness, we see the need to host an exhibition where all vendors and business owners, chief executives and IT managers to come together, and be introduced to the latest Business IT Solutions. We provide you the avenue to strategize and leverage on such new technologies to further your productivity and competitiveness. Hence the introduction of our new exclusive segment known as TechBiz @ Malaysia IT Fair. This is a place where it is everything about business IT solutions.

Come and experience the new marketplace that allows you to seek and understand latest technology. We have prepared 4 main trending IT topics, namely, cloud computing, big data, network security, and virtualization, which fits your business needs.

Also, don't forget to join in with the rest of our 200,000 crowd of participants to get the hottest deals in IT Gadgets, with more than 80 global brands covering over 300 booths.

WHY VISIT?

DISCOVER new Technology
EVALUATE Solutions
CONNECT with peers
UPDATE latest Trends
DISCUSS Initiatives
NETWORKING with Thought Leaders and Decision Makers

A New
Marketplace,
SEMINAR &
EXHIBITIONS
COMBINED

COMMVAULT® 

Virtualization Backup And Disaster Recovery Strategies Data Conversation Is Changing Data Management & Archiving

10 SIGNS THAT YOU NEED TO MODERNIZE YOUR BACKUP AND RECOVERY SOLUTION

Data protection is critical for business success. Yet, with rapid data growth, increasing infrastructure complexity, and new strategic initiatives including virtualization, cloud, BYOD and compliance, legacy backup methods simply don't meet the demands of today's modern data center.

- I can't complete backups within my backup window
- I have too much data redundancy
- I have a number of point backup tools that are hard to manage
- My backup processes require too much manual intervention
- My endpoint data isn't being protected
- I'm not confident that i can meet my RTO and RPO for critical applications
- My backups slow my production environment down
- I'm not making the most of my storage resources
- I can't afford to implement disaster recovery for all of my applications
- My backup solution won't support the cloud

If you checked any of these signs, it may be time for you to evaluate Commvault software. From a single platform, Commvault software delivers a modern approach to data management that will give you a truly holistic approach to protecting, managing and accessing your data.

KASPERSKY

Securing Your Business with Kaspersky Endpoint Security for Business

According to Kaspersky Lab's spam report for the first quarter of 2013, the percentage of spam in total mail traffic averaged a whopping 66.5%.

Spam messages are generally blasted out in large quantities in the form of commercial messages and advertisements to entice unsuspecting victims to open or click a malware-laden link. Spammers are also capable of comprising targeted corporate websites through JavaScripts and spambots.

Although 80% of enterprises across the globe have implemented anti-spam technologies, there is no guarantee that businesses are safe from spam given that cybercriminals are using increasingly sophisticated techniques to steal information.

Cybercrime activities are truly impressive – Kaspersky Lab experts detect an average of 200,000 new malicious programs everyday and 72% of all email messages are spam.

For a more secured and safer IT infrastructure for businesses of any size, the Kaspersky Endpoint Security for Business (KESB) platform offers comprehensive protection for all nodes within the corporate IT infrastructure, including servers, workstations and mobile devices protecting.

The KESB platform is ideal for businesses of all sizes including small-to-mid-sized businesses which suffer from a lack of IT resources and expertise to manage the complexity of malware.

The four tiers offerings of Kaspersky Endpoint Security for Business are CORE, SELECT, ADVANCED and TOTAL. In addition, Kaspersky Targeted Security solutions offer a cost-effective way to put Kaspersky technologies precisely where you need them – as standalone solutions or to extend your Kaspersky Endpoint Security for Business solution.

DAMBALLA® FAILSAFE:
AUTOMATED BREACH DEFENSE

**CYBER BREACH,
HYPE OR REALITY?
HOW TO MITIGATE THE RISK?**

CONTAIN THREATS INSTEAD OF CHASING ALERTS

Instead of relying on any one technique or a snapshot in time, Damballa Failsafe operates in real-time and gathers evidence over time. Failsafe produces actionable intelligence using multiple techniques:

- Analyzes network traffic using patent-pending communication and risk profilers
- Passes information to the Case Analyzer, which determines with certainty the infection status
- Provides responders with definitive evidence so they can prioritize actions based on risk

Damballa Failsafe is an important tool in an organization's incident response efforts. You can't respond to what you don't see. Damballa both accurately detects malicious activity and enables us to respond effectively.

-CISO at the University of Tampa

PRIVACY AND REGULATION

Hillstone E-Series next generation firewalls provide visibility and control of web applications regardless of port, protocol, or evasive action. It can identify and prevent potential threats associated with high-risk applications while providing policy-based control over applications, users, and user-groups. Policies can be defined that guarantee bandwidth to mission-critical applications while restricting or blocking inappropriate or malicious applications. Hillstone E-Series firewalls incorporate comprehensive network security and advanced firewall features. They provide superior price performance, excellent energy efficiency, and a smaller size when compared to competing products.

- Granular Application Control
- Proactive Threat Protection
- Visibility and Control
